

VOSSO THERMAL 2 PIECE

Polartec Fleece Construction The overall is made from Polartec fleece, a premium fabric known for its excellent thermal insulation, moisture-wicking properties, and lightweight nature. This ensures the wearer maintains core warmth without added bulk, enhancing overall comfort during extended periods in water or flood rescue operations.

Thermal Top: Paired with the overall is a thermal top, designed to offer superb heat retention while allowing for flexibility and freedom of movement. This combination allows for easy heat regulation, enabling users to adjust layers based on environmental conditions and personal comfort levels.

Male and Female Fits: The Thermal 2 Piece top is available in both male and female-specific fits, ensuring a tailored and secure fit for all users. This attention to ergonomic design enhances mobility, reduces drag, and ensures maximum thermal efficiency.

Convenient Zippers: The garment features strategically placed male and female convenience zippers, making it easy for users to perform essential tasks such as toilet visits without having to remove the entire outfit. This feature promotes efficiency and practicality, especially during extended rescue operations.

Layering Capability: The design of the Thermal 2 Piece allows users to adjust the level of thermal protection by adding or removing additional layers beneath the overall and top. This modular system provides flexibility for the wearer to regulate body temperature according to varying working conditions or personal preferences, ensuring consistent comfort throughout different rescue scenarios.

Dry Suit Compatibility: The Vosso Thermal 2 Piece is engineered to work seamlessly under a dry suit, offering an additional layer of warmth without interfering with the suit's waterproof integrity. This makes it ideal for use in extreme cold-water environments, where maintaining body temperature is critical for the safety and performance of rescue personnel.

Applications:

Ideal for use in water and flood rescue operations, the Thermal 2 Piece provides essential thermal protection in demanding environments. Its flexibility, ease of use, and superior heat retention make it an indispensable garment for rescue teams operating in various temperature and wet conditions.

With its thoughtful design and innovative features, the Thermal 2 Piece ensures that rescue professionals can focus on their mission with confidence, knowing that they have the ultimate thermal protection in place.
